The P5 to P95 heart rate spread was 24 bpm (52 to 76), indicating significant cardiac variability.

Suggested Clinical Review Actions

- High Breathing (avg 35 brpm, peak 46 brpm): Check SpO2, work of breathing, fever; consider pulmonary cause or CHF
- Elevated Breathing (avg 26 brpm, peak 46 brpm): Check SpO2 and lung sounds; assess for fluid overload or early infection
- High Heart Rate (avg 103 bpm, peak 115 bpm): Check temp, hydration, pain; review for arrhythmia or infection
- Elevated Heart Rate (avg 98 bpm, peak 120 bpm): Check temp, hydration, pain; review for arrhythmia or infection
- Very High Breathing (avg 44 brpm, peak 54 brpm): Check SpO2, work of breathing, fever; consider pulmonary cause or CHF

Clinical Pattern Observations:

- High variability:** HR spread 24 bpm (52 to 76).
- Clustered pattern:** Episodic events on 5 of 65 days (7%).
- Daytime pattern:** Episodes concentrated during waking hours.

Red bars indicate days with detected episodic events.

Monitoring Activity

Bars indicate monitoring hours/day. Red threshold line indicates clinical monitoring baseline.

■ HR episode ■ RR episode ■ Recorded, no episode ■ No data

Episodic event: threshold exceeded continuously for ≥ 1 hour. Episodes separated by ≤ 1 hour of normal vitals are counted as the same event. Brief threshold crossings that do not sustain are not flagged.
