The P5 to P95 heart rate spread was 33 bpm (59 to 92), indicating significant cardiac variability. Daily recorded hours declined from 24.0 to 1.0 (96%) over the monitoring period.

Suggested Clinical Review Actions

- Elevated Breathing (avg 25 brpm, peak 47 brpm): Check SpO2 and lung sounds; assess for fluid overload or early infection
- High Heart Rate (avg 104 bpm, peak 115 bpm): Check temp, hydration, pain; review for arrhythmia or infection
- Elevated Heart Rate (avg 97 bpm, peak 108 bpm): Check temp, hydration, pain; review for arrhythmia or infection
- Overall trajectory shows 6 unstable phases with 33 bpm variability. Consider increasing monitoring frequency and lowering escalation threshold.
- Daily recorded hours declined from 24.0 to 1.0 (96%) over the monitoring period.

Clinical Pattern Observations:

- 1. **High variability:** HR spread 33 bpm (58 to 91).
- 2. **Clustered pattern:** Episodic events on 5 of 32 days (15%).
- 3. **Nocturnal pattern:** 5 of 6 eligible episodes during evening or night hours.

Red bars indicate days with detected episodic events.

Monitoring Activity

Bars indicate monitoring hours/day. Red threshold line indicates clinical monitoring baseline.

■ HR episode ■ RR episode ■ Recorded, no episode ■ No data

Episodic event: threshold exceeded continuously for ≥ 1 hour. Episodes separated by ≤ 1 hour of normal vitals are counted as the same event. Brief threshold crossings that do not sustain are not flagged.
