+ 1 additional condition(s) across High Breathing (brief); details in monitoring data.

The P5 to P95 heart rate spread was 52 bpm (44 to 96), indicating significant cardiac variability.

Clinical Pattern Observations:

- 1. Sustained finding: 8h continuous Low Heart Rate beginning Jul 20.
- 2. High variability: HR spread 52 bpm (43 to 95).
- 3. Clustered pattern: Episodic events on 7 of 31 days (22%).

Red bars indicate days with detected episodic events.

Vital Sign Distribution

Monitoring Activity

Bars indicate monitoring hours/day. Red threshold line indicates clinical monitoring baseline.

■ HR episode ■ RR episode ■ Recorded, no episode ■ No data

Clinical Alerting Thresholds

■ Very Low HR < 40 bpm ■ Low HR < 45 bpm ■ Elevated HR > 95 bpm ■ High HR > 100 bpm
■ Very High HR > 110 bpm ■ Elevated Breathing > 24 brpm ■ High Breathing > 30 brpm ■ Very High Breathing > 40 brpm

Episodic event: threshold exceeded continuously for ≥ 1 hour. Episodes separated by ≤ 1 hour of normal vitals are counted as the same event. Brief threshold crossings that do not sustain are not flagged.
