

CLINICAL INTELLIGENCE TREND REPORT

GREEN: Routine Review

Patient ID: Nancy Period: July 17 to July 24, 2024 Report Date: July 25, 2024 Coverage: 84/182h (46.2%)
Decision-support summary derived from longitudinal vital sign trends; interpret in clinical context.

Patient clinical status over 8 days from Jul 17 to Jul 24 ■ HR ■ Breathing

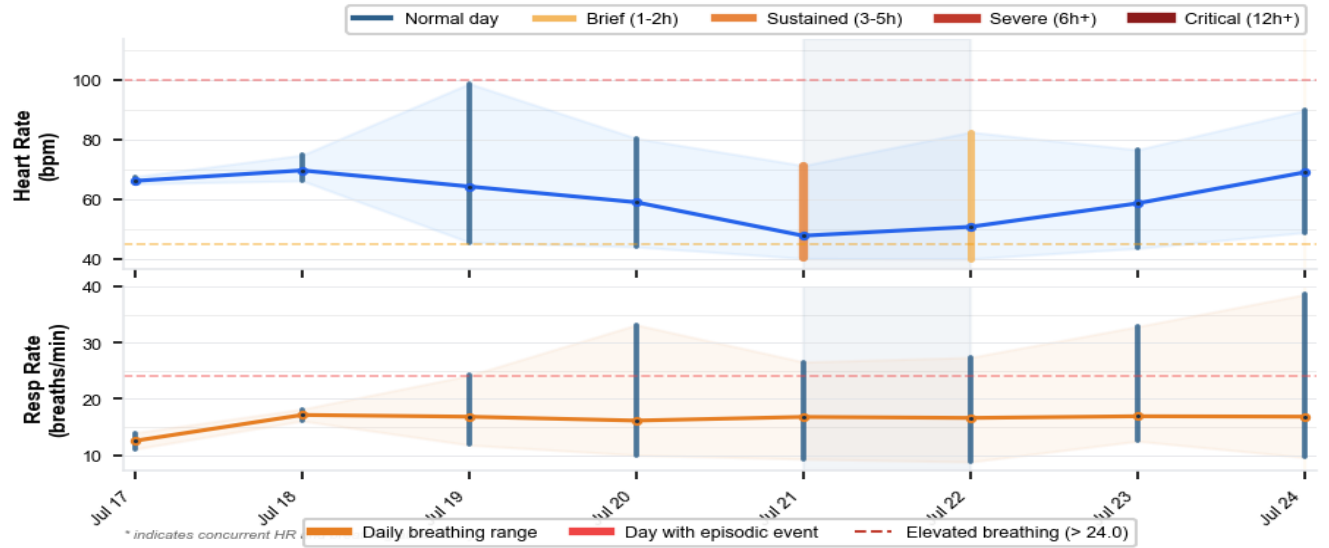

Episodic Events	Total Hours	Highest Burden	Episodes/day	Coverage
8	8h	Low Heart Rate	1	46%

Major Findings: Stable baseline

#	Episode	Min/Max	Total Hours	Longest Continuous	Episodes/day	Average	Date
1	Low Heart Rate	40 bpm	7h	1h	4	49 bpm	Jul 21 to Jul 22
2	Elevated Breathing	39 brpm	1h	1h	1	17 brpm	Jul 24

Low data coverage (46%); interpret with caution.

- Clinical Pattern Observations:
- 1. **Clustered pattern:** 3.0 events per active day across 2 days.
 - 2. **Nocturnal pattern:** 4 of 6 eligible episodes during evening or night hours.

Red bars indicate days with detected episodic events.
■ HR episode ■ RR episode ■ Recorded, no episode ■ No data

Clinical Alerting Thresholds

- Very Low HR < 40 bpm

■ Low HR < 45 bpm

■ Elevated HR > 95 bpm

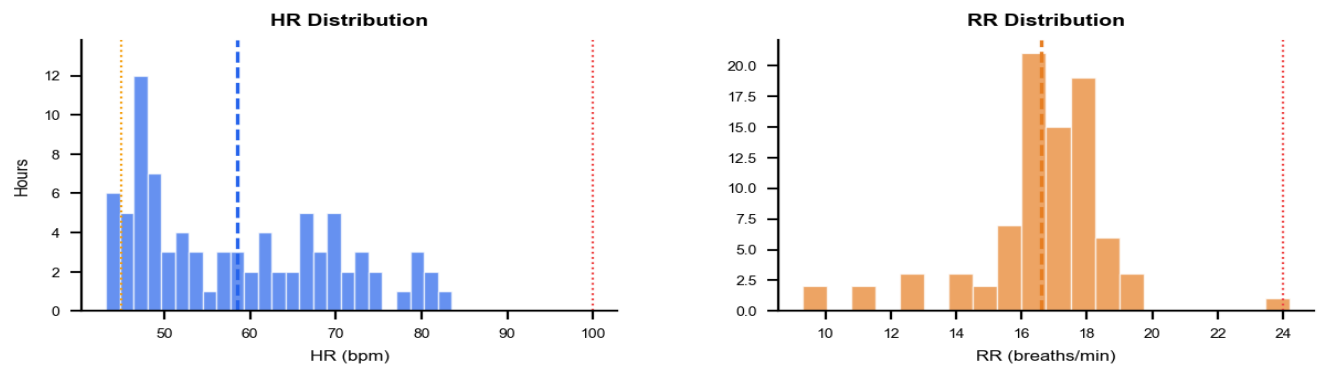

■ High HR > 100 bpm
- Very High HR > 110 bpm

■ Elevated Breathing > 24 brpm

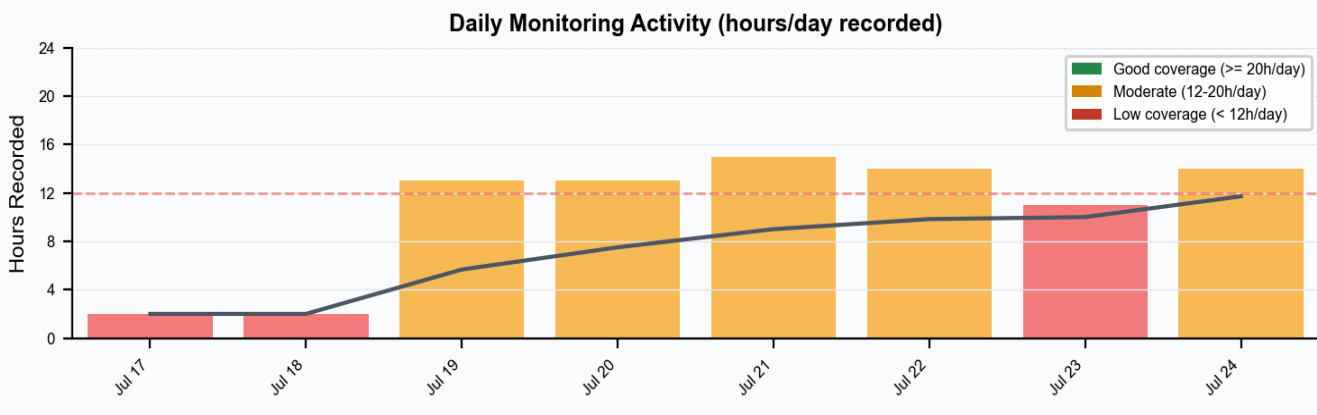

■ High Breathing > 30 brpm

■ Very High Breathing > 40 brpm
- Episodic event: threshold exceeded continuously for ≥ 1 hour. Episodes separated by ≤ 1 hour of normal vitals are counted as the same event. Brief threshold crossings that do not sustain are not flagged.

Vital Sign Distribution

Monitoring Activity

Bars indicate monitoring hours/day. Red threshold line indicates clinical monitoring baseline.
