

CLINICAL INTELLIGENCE TREND REPORT

YELLOW: Closer Observation Suggested

Patient ID: TMiller **Period:** August 23 to August 30, 2024 **Report Date:** August 31, 2024 **Coverage:** 137/192h (71.4%)

Decision-support summary derived from longitudinal vital sign trends; interpret in clinical context.

Patient clinical status over 8 days from Aug 23 to Aug 30 ■ HR ■ Breathing

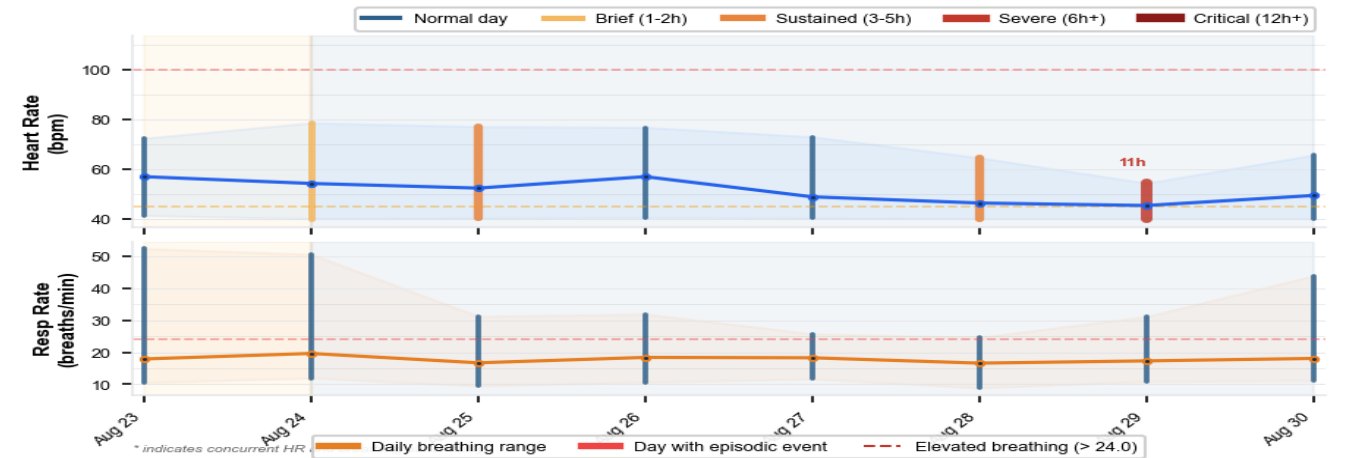

Episodic Events	Total Hours	Highest Burden	Episodes/day	Coverage
16	32h	Low Heart Rate	2	71%

Major Findings: Sustained low HR (avg 50, min 40)

#	Episode	Min/Max	Total Hours	Longest Continuous	Episodes/day	Average	Date
1	Low Heart Rate	40 bpm	28h	5h	2	50 bpm	Aug 24 to Aug 30
2	High Breathing	51 brpm	1h	1h	1	20 brpm	Aug 24
3	Elevated Breathing	52 brpm	3h	1h	2	19 brpm	Aug 23 to Aug 24

Clinical Pattern Observations:
1. **Worsening trajectory:** 10 → 16 events vs prior period.

Red bars indicate days with detected episodic events.

■ HR episode ■ RR episode ■ Recorded, no episode ■ No data

Clinical Alerting Thresholds

Very Low HR < 40 bpm

Very High HR > 110 bpm

Low HR < 45 bpm

Elevated Breathing > 24 brpm

Elevated HR > 95 bpm

High Breathing > 30 brpm

High HR > 100 bpm

Very High Breathing > 40 brpm

Episodic event: threshold exceeded continuously for ≥ 1 hour. Episodes separated by ≤ 1 hour of normal vitals are counted as the same event. Brief threshold crossings that do not sustain are not flagged.
